

POLYBUSH

Your car could be better. If you think it's perfect, it's not.

If you think you've done everything to improve performance you haven't...

▲ **43B - BMW E46 / Z4 / 3 Series compact** - Front wishbone rear bush - The 43B comes in two pieces for easy fitting, and has a low friction centre negating the need for greasing - just fit and forget. The 43B fits perfectly and tightens ride and handling without negatively effecting comfort.

▼ **44AX - Audi, Skoda, VW (selected models)**
Rear beam bush - Due to its voided design the 44AX is easy to fit and absorbs vibration providing a better ride, and allowing for full articulation of the arm for controlled cornering.

You forgot something. Your only memories of suspension bushes may be them failing an MOT, but Polybush won't fail and they actually improve vehicle performance.

Polybush has been developing high quality bushes for over 22 years, which last longer, save you time and money on MOT's, and make a genuine positive difference to your vehicle's cornering, control, braking, ride quality, and tyre life.

You will have heard of Polybush before.

It's well-established and continues to create and release new and better bushes every year. This year has seen some amazing advances in models covered, over 400, and innovative bush design.

Polybush can't be at Autosport International this year - the team is busy on a new project and the

release of a brand-new website, as well as releasing products through its ever-growing national chain of distributors. However everyone at Polybush hopes you enjoy the Show, and look forward to showing you what we're working on. Call 01978 664 316 to find your local distributor.

Reasons to fit Polybush

- More responsive steering
- Improved braking stability
- Better ride
- Improved tire life
- Easy Fit
- Cost effective
- Last 4-5 times longer than OE
